

IUFRO 2024 Congress

Stockholm, Sweden

IRG-linked sessions

The IUFRO World Congress is one of the largest global forest events, held every five years since 1893. The congress gives a unique opportunity to gather worldwide leading scientists and top leaders to contribute and co-create for a sustainable future within Forestry, Climate and Society – aligned with the UN's 2030 Agenda for Sustainable Development and the future ahead.

The IUFRO World Congress 2024 is a collaborative global network platform with great opportunity for knowledge sharing and getting access to the latest science and research. The outcome of the event will also set the future research agenda and roadmap for next generations, this time focusing on **Forests & Society Towards 2050**. The congress week gives the delegates great opportunity to discuss the important role of our forests. We offer arenas for innovations, forward-looking dialogues, and the foundations for collaborations.

IRG members are leading two sessions within Theme 2: **Towards a responsible forest bioeconomy**

Session 2.20 “Novel treatments for wood and biobased products” will be led by Dennis Jones and Lina Nunes.

Session 2.35 “Wood durability and wood protection strategies for long-term carbon storage of wood products” will be led by Andrew H.H. Wong, Marie-France Thevenon, Roger Meder, Jun Liu and Tripti Singh.

Deadlines for abstracts for these sessions is June 2nd, 2023, with confirmation of acceptance expected early October 2023. More details on the sessions can be found on the IUFRO website (https://iufro2024.com/wp-content/uploads/IUFRO_2024-List_of_Sessions-1-1.pdf), or by contacting the IRG members directly.
